Results are from an OLS regression with robust standard errors. All variables are coded 0-1 and are measured in W3 or are from participants' YouGov profile. Political Attention is measured at Wave 6, immediately following the election. In the first panel, partisan strength is measured with the 8-item identity scale. In the middle panel partisan strength is measured based on the standard closeness item. In the third panel partisan strength is measured by the inparty rating scale. See text for

details.

Results are marginal effects from an logistical regression. All variables are coded 0-1 and are measured in W3 or are from participants YouGov profile. Vote choice is measured at Wave 6, immediately following the election. In the first panel, partisan strength is measured with the 8-item identity scale. In the middle panel partisan strength is measured based on the standard closeness item. In the third panel partisan strength is measured by the inparty rating scale. See text for details.

<i>N</i>	3,855			3,857			3,120		

Note: Entries are OLS regression coefficients with standard errors in parentheses. Partisan identity is an 8-item identity scale; see text for details. Traditional partisan strength is measured at 3 levels of intensity (very convinced, somewhat convinced, not convinced). Like Party is rating of the party on a -5 to +5 scale; scores below 0 are set to 0. Ideological intensity is based on 5 economic and 5 social questions including support for reduced income inequality, support for the environment over growth, increased migration, and more power to women. Variables are combined and then folded to indicate intensity on the political right and left. All variables are recoded to range from 0 to 1. All variables are from Wave 5 of the Swedish Citizen Panel 2014 Internet panel.

* = $p < .05$, ** = $p < .01$, *** = $p < .001$
