Economics of Corporate Social Responsibility

The International Library of Critical Writings in Economics series

Edited by Abagail McWilliams, Professor of Strategic Management, University of Illinois at Chicago, US

This authoritative collection examines the five related and most significant elements of this subject - theoretical perspectives, firm financial performance, socially responsible investing, environmental performance and strategic CSR - to provide a comprehensive exploration of the literature on Corporate Social Responsibility and its economic consequences.

‘The academic debate over CSR and its implications to the economy and society has been vast over the past decades. The current collection composes an innovative, thorough and holistic review of the literature regarding the economics of CSR. The contributions are categorized under the prism of their subject rather than their discipline. Therefore, the reader is being offered a unique, outstanding guidance throughout this imperative branch of the economics literature.’

– Evangelos Mitrokostas, University of Portsmouth, UK
