Chinese Technology Transfer in the 1990s

Current Experience, Historical Problems and International Perspectives

Edited by the late Charles Feinstein, formerly Chichele Professor of Economic History and Fellow, All Souls College, University of Oxford, UK and Christopher Howe OBE, Emeritus Professor, Chinese Business and Management, School of Oriental and African Studies, University of London, UK

Chinese Technology Transfer in the 1990s examines – with special reference to the reform policy and encouragement of foreign direct investment – scientific policy, research and development, and technology transfer in the People’s Republic of China.

‘An attractive feature of the book is that the papers deal with both contemporary and historical aspects of technology transfer in China and other countries . . . Altogether this volume is a valuable source of information about China’s rapid economic growth during the past two decades, the impact of S&T policies to industrial and technological development of developing countries in general, and the importance of foreign direct investment for the development of domestic technological capabilities.’

– Thee Kian Wie, Asian-Pacific Economic Literature

‘This is an excellent book and has relevance beyond the issues regarding technology transfer to China. The authors and editors have struck a chord that will resonate into the 21st century. Their discussion on the technology transfer issues associated with China, Japan and other countries are good case studies for those concerned with the study and implementation of technology transfer programs. I highly recommend this volume for those scholars and practitioners interested in a serious work in the field of technology transfer. Its value transcends the particular focus on China and adds significant merit to the ongoing debate in this arena.’

– Scott M. Shemwell, Journal of Asian Business

‘This collection contains a number of very interesting articles that should be of interest to any student of China’s modernization . . . Almost all essays are highly entertaining to read; great care has been taken in the translation of the contributions written by non-native speakers of English.’

– Wilt L. Idema, China Information

‘The book is unique as the first collaborative work in this theme.’

– Malcolm Warner, Asia Pacific Business Review

‘. . . this is an excellent study of technology transfer to China in a comparative context . . . This pioneering study is nevertheless indispensable for scholars, students and those practically involved in trade and investment in China.’

– Robert Taylor, Asian Affairs
