Handbooks of Research on International Political Economy series

Edited by Andreas Goldthau, University of Erfurt, Germany, Michael F. Keating, Richmond, the American International University in London and Caroline Kuzemko, The University of Warwick, UK

This Handbook offers a comprehensive overview of the latest research from leading scholars on the international political economy of energy and resources. Highlighting the important conceptual and empirical themes, the chapters study all levels of governance, from global to local, and explore the wide range of issues emerging in a changing political and economic environment.

'The volume succeeds in defining the IPE of energy as a field and shows us where it has been and where it is going. It should be very useful to economists, political scientists, and sociologists interested in the political economy of energy, both at the international and domestic levels. This Handbook also shows the significant benefits of interdisciplinary collaboration around a topic of global significance.'

– Ilia Murtazashvili, *The Energy Journal*

'Edward Elgar's research handbook collections have mastered the art of collating works of high-impact academic literature edited by some of the world's leading scholars. This text continues in the same repute with contributions from some of the finest and most well renowned authors in the field, each drawing upon established scholarship and producing their own results that add to a variety of fields in economics, resource management, law, policy, international relations and politics.'

I applaud the success of this intellectually stimulating and comprehensive collection which is both profound and relevant in today's complex political economy, covering topical issues in context and serving as a useful reference. Students and particularly graduates in such fields will find this book of much help, as would practitioners, policy-makers and industry professionals.'

I highly recommend it.'

– Peter Newell, University of Sussex, UK
