

Energy Justice

US and International Perspectives

New Horizons in Environmental and Energy Law series

Edited by Raya Salter, Fordham Law School (Adjunct) and Principal Attorney, Imagine Power LLC, Carmen G. Gonzalez, Professor of Law, Seattle University School of Law and Elizabeth Ann Kronk Warner, Dean and Professor of Law, College of Law, The University of Utah, US

Energy Justice: US and International Perspectives is a pioneering analysis of energy law and policy through the framework of energy justice. While climate change has triggered unprecedented investment in renewable energy, the concept of energy justice and its practical application to energy law and policy remain under-theorized. This volume breaks new ground by examining a range of energy justice regulatory challenges from the perspective of international law, US law, and foreign domestic law. The book illuminates the theory of energy justice while emphasizing practical solutions that hasten the transition from fossil fuels and address the inequities that plague energy systems.

‘Energy Justice takes on the worthy missions of demonstrating that “energy law becomes energy justice when scholars, policy-makers, and activists apply to energy the justice frameworks developed by communities in struggle” and encouraging “further engagement with the emerging concept of energy democracy.” In sum, the book is a significant resource for energy and environmental law practitioners, policy-makers, teachers, and students.’

– Madeline Kass, Natural Resources & Environment

‘While European energy law school has been developing the energy justice concept for a few years, the volume under review offers some new perspectives focusing on the US instead. Published in the series “New Horizons in Environmental and Energy Law”, this volume adds to the impressive list that Edward Elgar has published over the last 15 years. Unlike some edited volumes, this book is consistent in the excellence of its research from chapter to chapter. Each contribution provides a detailed, in-depth and critical analysis of its subject-matter...this edited volume will prove to be an excellent point of reference for academics in energy law and social sciences, as well as practitioners and decision-makers working on the implementation of energy transition through project design and authorisation. It is undoubtedly a welcome addition to the growing body of highly relevant energy justice literature, standing out because of its authors’ vast expertise and critical approach to the topic.’

– Daria Shapovalova, International Energy Law Review

‘Racially and economically marginalized communities have long borne the brunt of energy projects while reaping few of the benefits. Drawing upon a wide range of case studies, including the Dakota Access Pipeline protests in the United States, this book breaks new ground in deepening our understanding of energy justice and in offering practical tools that can be used by scholars, activists, and policymakers to ensure safe, reliable, affordable, clean and sustainable energy for all.’

– Sheila R. Foster, Georgetown University, US

‘Blending conceptual strength and real-world examples from around the globe, this book shows us how the insights of justice-theory can be used to avoid the injustices of the past as we make the transition to a new generation of sustainable energy infrastructure. It’s a pleasure to see theory and practice so well woven together in ways that offer real guidance on next steps.’

– Michael Dworkin, Vermont Law School, US

‘This collection of essays is one of the first to examine clean energy policies through an

environmental justice framework. A moral examination of energy systems, it is a surprising and welcome addition to the literature for practitioners, advocates and policymakers as it offers analysis, case studies, and practical applications for thought leaders and action.'

– Peggy M. Shepard, WE ACT For Environmental Justice, US

'This book can be a guide for regulators as they make decisions about issues such as affordability and access to special programs that may have been deprived of the attention they merit in the past.'

– Ashley Brown, Harvard University, US
