Research Handbook on the Law of Artificial Intelligence

Edited by Woodrow Barfield, has served as professor of engineering and is currently editor of the Virtual Reality journal and is a review editor for Frontiers in Artificial Intelligence and Ugo Pagallo, Professor, Department of Law, University of Turin, Italy

The field of artificial intelligence (AI) has made tremendous advances in the last two decades, but as smart as AI is now, it is getting smarter and becoming more autonomous. This raises a host of challenges to current legal doctrine, including whether AI/algorithms should count as ‘speech’, whether AI should be regulated under antitrust and criminal law statutes, and whether AI should be considered as an agent under agency law or be held responsible for injuries under tort law. This book contains chapters from US and international law scholars on the role of law in an age of increasingly smart AI, addressing these and other issues that are critical to the evolution of the field.
