The Roles of Innovation in Competition Law Analysis

ASCOLA Competition Law series

Edited by Paul Nihoul, Professor, Université catholique de Louvain and Pieter Van Cleynenbreugel, Professor, University of Liège, Belgium

Rapid technological innovations have challenged the conventional application of antitrust and competition law across the globe. Acknowledging these challenges, this original work analyses the roles of innovation in competition law analysis and reflects on how competition and antitrust law can be refined and tailored to innovation.

‘The book, consisting of 14 pieces written by established authorities as well as by promising new voices in the field, offers an intuitive and harmonious read—thanks to the quality of the papers themselves but also to an excellent job done by its editors (...), who have reduced all the contributions to a common denominator, making the book an exciting volume which strikes a perfect balance between coherence and diversity.’

— O. Andryichuk, European Competition Law Review
