Judges, Technology and Artificial Intelligence

Elgar Law, Technology and Society series

Tania Sourdin, Professor of Law, Dean, University of Newcastle, Australia

New and emerging technologies are reshaping justice systems and transforming the role of judges. The impacts vary according to how structural reforms take place and how courts adapt case management processes, online dispute resolution systems and justice apps. Significant shifts are also occurring with the development of more sophisticated forms of Artificial Intelligence that can support judicial work or even replace judges. These developments, together with shifts towards online court processes are explored in Judges, Technology and Artificial Intelligence.

‘This book focuses on how new information technologies can support judges and lawyers. It explores the extent to which technological developments might replace judges, in at least some aspects of their work. Human justice requires protection of ethical frameworks, litigant vulnerability and sensitivity to diversity. The author is aware of the limits of change. But no practitioner can be complacent about difficulties and costs of access to the law. The author challenges us to think creatively and questioningly about the status quo.’
– The Honorable Michael Kirby AC CMG, Past Justice of the High Court of Australia

‘For fifty years, the legal community has avoided investigating the impact that Artificial Intelligence might have on the law. Then suddenly it has become petrified that robo-justice might become the norm. Tania Sourdin is an esteemed scholar and researcher in Artificial Intelligence, technology and law. In her book Judges, Technology and Artificial Intelligence she conducts a comprehensive excellent study of how technology is changing the way that we practice law.’
– John Zeleznikow, Latrobe University Law School, Australia
