International Financial Integration

The International Library of Critical Writings in Economics series

Edited by Sylvester Eijffinger, Professor of Economics, Tilburg University and CEPR and Jan J.G. Lemmen, formerly of the House of Representatives of the States General, the Netherlands

The degree of international financial integration achieved by capital flows remains a matter of debate. Furthermore, it evolves over time as markets become more and less integrated. Policymakers want to have a precise knowledge of the extent and direction of international capital flows because such flows influence the incentives for tax evasion, international redistribution and the vulnerability of the economy to external shocks.

‘Market integration, in Europe and elsewhere, is reshaping financial markets at the national and world level, with far-reaching implications for macroeconomic activity, corporate choices and household behavior. By bringing together the best articles on this issue, this book provides an essential reference, that will be of great service to policymakers and researchers alike.’
