The Evolution of Organizations

The International Library of Critical Writings on Business and Management series

Edited by John Child, Emeritus Professor of Commerce, University of Birmingham and Professor of Management, University of Plymouth, UK

The Evolution of Organizations brings together a selection of significant articles by leading academics as to how organizations and their environments evolve over time. They examine the foundation of evolutionary thinking, its application to the evolution of organizational populations and industries, the question of how individual organizations evolve, and the co-evolution of organizations and their environments.

“This is a splendid collection that brings together canonical articles, a range of disciplines and diverse approaches, all of which have contributed to explaining how organizations develop through time. This is a welcome and useful compendium.”
– Walter W. Powell, Stanford University, US

“The study of the evolution of organisations has been given a recent boost through new developments in evolutionary theory. John Child’s excellent anthology of essays brings together several key readings in this area, combining new theory with classic studies in the field. It is an indispensable collection.”
– Geoffrey M. Hodgson, University of Hertfordshire Business School, UK
