Challenges for European Innovation Policy
Cohesion and Excellence from a Schumpeterian Perspective

Edited by Slavo Radosevic, Professor of Industry and Innovation Studies, School of Slavonic and East European Studies, University College London, UK and Anna Kaderabkova, Director, Centre for Economic Studies in Prague, Czech Republic

This book uniquely applies the Schumpeterian innovation policy perspective to the countries of Central and Eastern Europe. A broadly defined framework of the science, technology, innovation and growth system underpins the empirical and conceptual analysis of the critical issues including demand, FDI, finance and education.

‘Overall, this book is successful in achieving its goals. It is theoretically informed and sophisticated, empirically rich, up-to-date, and laced throughout with trenchant economic policy analysis. Taken as whole, the essays in this book go beyond furthering our knowledge about the unique institutional and economic contexts within which innovation occurs in new Member States of the EU and develops a strong theoretical framework with which to discuss innovation policies in countries in transition. Both EU policy-makers and countries in transition seeking to formulate a technology policy to further their economic and industrial development will find the insights of this book valuable.’

– Zafer Sonmez, Science & Public Policy
