

Biomaterials Innovation Bundling Technologies and Life

Alexander Styhre, School of Business, Economics and Law,
University of Gothenburg, Sweden

Rapid advances in the life sciences means that there is now a far more detailed understanding of biological systems on the cellular, molecular and genetic levels. Sited at the intersection between the life sciences, the engineering sciences and the design sciences, innovations in the biomaterials industry are expected to garner increasing attention and play a key role in future development. This book examines the biomaterials innovations taking place in corporations and in academic research settings today.
