Renewable Energy law and Development

Case Study Analysis

Richard L. Ottinger, Dean Emeritus, Pace Law School, US

This is a unique book written by one of the leading scholars in the field. It uses detailed case studies to analyze the successes, failures and challenges of renewable energy initiatives in developing and emerging countries.

‘Half the world’s new electric generating capacity added each year from 2008 onwards has been renewable, mainly now in developing countries. So is the quarter-trillion dollars a year of private investment in modern renewable energy. Organizations like REN21 and Bloomberg New Energy Finance track exciting and accelerating recent progress. But to understand how these renewable energy efforts in major developing countries have been structured and are evolving requires a guidebook with a legal and institutional perspective. Energy veteran Richard Ottinger and his Pace Law School graduate students from many key countries have now provided that guide—clearly written, well-organized, and a great public service.’
– Amory B. Lovins, Rocky Mountain Institute, US

‘Richard Ottinger, a pioneer in the development of national policy to promote renewable energy in the US, and his Pace Law School research assistants have created a unique piece of work on the legal and policy issues behind the global growth of renewable energy. Their book is indispensable as a text for law professors and students and as the definitive reference for lawyers and policymakers about developing and emerging country policies driving renewable energy use around the world. The fact that most of the research assistants are natives of the countries on which they researched and wrote their respective chapters gives the book uniquely credible insights into the legal and policy challenges faced by these countries, providing valuable lessons for others wanting to build renewable energy capacity in their own countries’
– Robert Noun, Former Executive Director of Public Affairs, National Renewable Energy Laboratory and Adjunct Professor, University of Denver Sturm College of Law, US

‘This book is unique in the literature on renewable energy law and policy. Firstly, it focuses on developing countries which means it fills the gap in international literature currently lacking on law and policy on renewable energy in developing countries. Secondly, it applies a basic uniform analysis method to each of the case studies. This makes the results of the case studies considerably comparable. Finally, based on the introduction to the related laws, policies and projects of the target countries, the author summarizes their experience and lessons. It is these summaries that reflect the purpose and value of this book.’
– Wang Xi, Shanghai Jiao Tong University, Shanghai, China
