A Guide to EU Renewable Energy Policy
Comparing Europeanization and Domestic Policy Change in EU Member States

Edited by Israel Solorio, National Autonomous University of Mexico and Helge Jörgens, ISCTE-Instituto Universitário de Lisboa, Portugal

This book is a guide for understanding the EU renewable energy policy as one of the most ambitious attempts worldwide to facilitate a transition towards more sustainable energy systems. It contains key case studies for understanding how member states have shaped the EU renewable energy policy, how the EU has affected the policies of its member states and how renewable energy policies have diffused horizontally. An analysis of the external dimension of the EU renewable energy policy is also included.

‘Renewable energy policy is a well-established, high-ranking policy in Europe but its perspectives, strengths and weaknesses need competent analysis. This book is a highly valuable “standard” publication not only for energy and climate policy experts but also for political and social scientists.’
– Martin Jänicke, Freie Universität Berlin, Germany

‘The word “guide” in the title of this book is an understatement. With its focus on renewable energy policies in a wide range of EU member states, this book fills an important gap in the literature. The rigorous structure of the chapters, all of them written by key experts in the field, and the incisive analysis of national policies and processes of Europeanization in the concluding chapter make it a major achievement of comparative research. A must-read for everyone interested in energy and climate change politics!’
– Duncan Liefferink, Radboud University, Nijmegen, the Netherlands
