Renewable Energy Law in the EU

Legal Perspectives on Bottom-up Approaches

New Horizons in Environmental and Energy Law series

Edited by Marjan Peeters, Professor of Environmental Policy and Law, Maastricht University, the Netherlands and Thomas Schomerus, Professor of Energy and Environmental Law, Leuphana University, Lüneburg, Germany

This timely book examines the role played by regional authorities in the EU in the transition towards renewable energy. Drawing on both academia and practice, the expert contributors explore some of the key legal questions that have emerged along the energy transition path. Specific attention is paid to support mechanisms, administrative procedures for authorizing renewable energy projects, and opportunities for allowing citizens, particularly citizens living near renewable energy projects, to participate financially in renewable energy production.

“This is a timely contribution to the body of literature on renewable energy and the role and responsibilities of the local and regional government authorities which must – like it or not – eventually implement it across the European Union. Environmental lawyers, as well as decision makers in local governments throughout the EU will definitely need to acquire this book.”
