

New Technologies and Transportation Research

Applications of GPS in Travel Surveys

Classics in Transport and Environmental Valuation
series

Edited by Peter Stopher, Emeritus Professor of Transport
Planning, Institute of Transport and Logistics Studies, The
University of Sydney Business School, Australia

This book presents a collection of the most significant
papers to have been published over the past fifteen years
on the use of Global Positioning System (GPS) devices to
measure person and vehicle travel. The carefully selected
papers are prefaced by an original introduction. They track
developments in the use of GPS devices to record travel
and document some of the latest applications in which GPS
is starting to replace conventional self-report surveys.
