Handbook on Biodiversity and Ecosystem Services in Impact Assessment

Research Handbooks on Impact Assessment series

Edited by Davide Geneletti, Associate Professor, University of Trento, Italy

This Handbook presents state-of-the-art methodological guidance and discussion of international practice related to the integration of biodiversity and ecosystem services in impact assessment, featuring contributions from leading researchers and practitioners worldwide. Its multidisciplinary approach covers contributions across five continents to broaden the scope of the field both thematically and geographically.

‘This volume integrates across disciplinary, sectoral and national perspectives to illuminate the cutting edge of contemporary assessment theory and practice. Particular strengths include its focus on how changes in ecosystem services affect human well-being, its elaboration of methods for spatially explicit assessment, its insights on cumulative effects, its inclusive approach to evaluation metrics, and its insistence on the importance of stakeholder involvement in assessment processes. This wonderfully accessible volume will surely become an indispensable desk reference for all seeking to improve the management of biodiversity, ecosystem services, and sustainable development.’

– William C. Clark, Harvard University, US
