Research Handbook on Environment and Investment Law

The Research Handbook on Environment and Investment Law examines one of the most dynamic areas of international law: the interaction between international investment law and environmental law and policy. The Research Handbook takes a thematic approach, analysing key issues in the environment–investment nexus, such as freshwater resources, climate, biodiversity, biotechnology and sustainable development. It also includes sections which explore regional experiences and address practice and procedure, and offers innovative approaches and critical perspectives, including the interface between foreign investment and the environment with human rights, gender, indigenous peoples, and economics.

‘From sustainable development, climate change and biodiversity, to process, science and the green economy, to regional approaches, indigenous cultural heritage and local environments, this Research Handbook provides a profound analysis of the multifaceted interaction of the environment and investment. Well-established and emerging multidisciplinary scholars have brought together a first-rate treatment of conflict and reconciliation in environmental and investment law. This is a Research Handbook for all interested in understanding the environmental dimensions of this critical economic activity.’

– Donald McRae, Emeritus Professor of Law, University of Ottawa, Canada
