Handbook on the Geographies of Money and Finance

Research Handbooks in Geography series

Edited by Ron Martin, Professor of Economic Geography, Director of Research and Fellow of St Catharine’s College, University of Cambridge, London and Jane Pollard, Professor of Economic Geography, Centre for Urban and Regional Development Studies and School of Geography, Politics and Sociology, Newcastle University, UK

The aim of this timely work, which appears in the wake of the worst global financial crisis since the late 1920s, is to bring together high quality research-based contributions from leading international scholars involved in constructing a geographical perspective on money. Topics covered include the crisis, the spatial circuits of finance, regulation, mainstream financial markets (banking, equity, etc), through to the various ‘alternative’ and ‘disruptive’ forms of money that have arisen in recent years. It will be of interest to geographers, political scientists, sociologists, economists, planners and all those interested in how money shapes and reshapes socio-economic space and conditions local and regional development.

‘This is an interesting and well-referenced book that contains a lot of useful knowledge about the world’s financial and monetary systems.’
– Gordon F. Mulligan, Economic Development Quarterly
