Since 1978, when China embarked on a new period of economic reforms and introduced open door policies, it has experienced a great urban transformation. The role of transport has proved indispensable in this unprecedented rapid urbanisation and economic growth. As the first research-focused book dedicated to this important topic, the Handbook on Transport and Urban Transformation in China offers new insight into the various opportunities and challenges brought by fast-paced motorization and urban development, and explores them in broad spatial-economic, environmental, social, and institutional dimensions.

'This book provides a welcome addition to our understanding of urban transformation in China where the scale and speed of change has been phenomenal over the last 40 years. It covers all forms of transport, examining the modes, the environmental issues, social justice, and technology, as well as governance and detailed case studies. It is truly a synoptic book that will provide a benchmark resource for future research.'

– David Banister, Professor Emeritus of Transport Studies and St Anne’s College, University of Oxford, UK
