This insightful book showcases a range of design, planning and policy responses to ageing populations and the built environment from across the rapidly changing and dynamic Western Asia-Pacific region. Its chapters demonstrate a clear and increasingly convergent preference for and promotion of ageing in place and the need for collaborative efforts to facilitate this at various scales through policy and practice.

‘This comprehensive book provides a unique offering to our understandings of ageing in place. It is particularly valuable in highlighting the differences and similarities in supporting and assisting ageing in place across countries with varying levels of ageing, different cultural norms and political systems but also in its approach from a detailed micro level analysis of housing design to the macro influences of policy. This is an important contribution to the scholarship on enabling older populations to age well.’
– Debbie Faulkner, University of South Australia

‘Tackling an important and growing challenge for countries throughout the world Ageing in Place provides a much-needed multi-country dialogue on ageing with dignity. Chapters grounded in empirical work and project examples investigate how China, Japan, Australia, and New Zealand are addressing the crucial connections between older people, their homes, and quality of life. This is a valuable and timely book.’
– Ann Forsyth, Harvard University, US

‘In this volume the editors have compiled some of the most important research on the housing situation of older people in the Western Asia-Pacific region. In particular, the term “ageing in place” is discussed, a condition much favoured by governments across the globe. With its focus on population ageing and the built environment in this geographical region the book is a most welcome contribution to the literature in this field of research.’
– Marianne Abramsson, Stockholm University, Sweden
