The Legacy of Piero Sraffa

Intellectual Legacies in Modern Economics series

Edited by Heinz D. Kurz, Emeritus Professor of Economics, University of Graz and Graz Schumpeter Centre, Austria and Neri Salvadori, Professor of Economics, University of Pisa, Italy

It is generally acknowledged that Piero Sraffa was one of the most original and important economic theorists of the twentieth century. The significance of Sraffa’s contributions lies in the fact that he elaborated an alternative to the marginalist theory of value and distribution rooted in the analyses of the classical political economists from Adam Smith to David Ricardo.

‘This is a welcome addition to the literature on Sraffa. It brings together a large number of important papers by distinguished researchers representing an influential and widely shared interpretation of his work. It will be of great use to scholars who are closely familiar with Sraffa and to those who are not. The collection is likely to generate increased interest in Sraffa and add to the high level of expectation and anticipation directed toward the eventual publication of Sraffa’s unpublished papers.’

‘...this is a very fine collection of papers, which should be of great interest to every economist who is interested in the history and future of economic theory...this reference collection will make a very valuable addition to your research library.’
– Christian Gehrke, Economic Systems Research
