Entrepreneurship and innovation are increasingly viewed as key contributors to global economic and social development. University-based entrepreneurship ecosystems (U-BEEs) provide a supportive context in which entrepreneurship and innovation can thrive. In that vein, this book provides critical insight based on cutting-edge analyses of how to frame, design, launch, and sustain efforts in the area of entrepreneurship.

‘...this volume is worthy of the attention of senior managers in universities that aspire to be entrepreneurial, which for better or worse means nearly all universities on the globe.’
– Gareth Williams, London Review of Education

‘A book of this magnitude, usefulness and complexity can hardly be framed within one direction of contribution to entrepreneurship education, it is many voices, responses and pathways of academic institutions clustered in an admirable collection of university-based entrepreneurship ecosystems.’
– Silvia Florea, Management of Sustainable Development
